

It's hard enough now to explain to my neighbors that my transmissions on the ham bands which wipe out certain cable channels are legal. How am I also going to explain when I wipe out their BPL delivered high speed internet? Try to explain this to a 70 year old lady without a high school education who doesn't understand anything about electronics. She just knows that whenever I transmit it messes up her stuff! If BPL comes to town it will just get worse. There are so many OTHER ways to deliver broadband to homes, we should just skip the BPL way. Most of the rural areas here in Okla are already using wireless, they don't need BPL. City folks have DSL or CABLE, they don't need BPL.
